Bellast®

Hyaluronic acid loss: the sign of aging

As we age, the ability to produce hyaluronic acid in skin is gradually decreased. The aging process is quite closely linked to this decrease in hyaluronic acid. Hyaluronic acid may help to hold back the entire degenerative process we call aging.

Skin with high hyaluronic acid content

- Remains hydrated and surface is pliable.
- Wrinkles are visibly reduced.

Skin with low hyaluronic acid content

- Due to a lack of hyaluronic acid, an ability to hold moisture is reduced. Skin loses its elasticity and surface becomes dry.
- Visible wrinkles appear.

**Hyaluronic acid loss can make
you look older or unhealthy.**

My skin but better Bellast

Bellast Series contains cross-linked hyaluronic acid as an active ingredient. Each product is designed to rejuvenate by filling wrinkles and folds, improve facial contour, create volume or have glowing complexion. You can choose the product depending on where you want to treat.

Why Bellast?

Natural substance for human body

Hyaluronic acid for Bellast Series is non-animal origin. Also, it is biocompatible to human body so degrades naturally over time.

Immediate and Long-lasting effect

Wrinkles and folds are filled out as soon as you have a treatment with Bellast Series, and it lasts for 6 months (It depends on the injection area, or patient's condition).

Less adverse events or complications

Bellast Series is designed to have optimum combination of viscosity and elasticity, so you don't worry about the gel migration or easy modification in tissue including the complications caused by it.

**Bellast gives you
high satisfaction with safety**
