### Hyaron

#### Raw Materials and Quantities

Effective Ingredients : Sodium hyaluronic acid

Total amount	Name of component	Quantity	Unit	Specification	Component Information	NOTE
1mL	sodium hyaluronic acid	10	Milligram	EP		

Additives : sodium phosphate, sodium chloride, drinking water, sodium phosphate

#### Usage capacity

- **Adult** : As sodium hyaluronic acid, 25mg of sodium hyaluronic acid is administered once a week in the knee cavity or in the joint (tubial cavity, hypertrophy, or parietal head tendon hay) for five consecutive weeks, but the number of injections is appropriately increased or decreased depending on the symptoms. This drug is administered in the cavity, so it is carried out under strict aseptic manipulation.
